2. **05SPP-00000-00002** **Key Site 11 English-Joseph** **Santa Maria**

Larry Appel, Supervising Planner (805) 934-6263
Adam Baughman, Planner (805) 934-6263

Hearing on the request of Coker Elsworth, agent for the owners, English-Joseph Property Investments, for Conceptual Review of Case No. 05SPP-00000-00002 [application filed on December 16, 2005], for a Specific Plan for Orcutt Ket Site 11 to allow 98,806 square feet of mixed use development consisting of 30 apartment units over 56,806 square feet of commercial development. The project would be two stories with surface and underground parking (315 spaces). Approximately 37,000 cubic yards of grading would be required. The application involves AP No. 103-181-006, located at 250 East Clark Avenue, Orcutt area, Fourth Supervisorial District. (Continued from 8/9/06)

ACTION: Conceptual review only. The Commission made the following comments on the project:

- Boysen:**
- **The traffic on Clark cannot be significantly impacted by this project. Inclusion of another traffic signal on Clark is not an acceptable mitigation for traffic impacts.**
 - **The traffic study needs to be based on current conditions, not hypotheticals from the Orcutt Community Plan.**
 - **The essence of the project is good, however, this project may be too intense for this location.**
- Brown:**
- **Each structure must be architecturally designed with articulated facades on all four elevations as these structures would be easily visible from all sides.**
 - **The bridges between Bldgs. A & D appear to add to the mass of the structures and are not necessary.**
 - **The western-most structure should be more compatible with the adjacent Chevron station in terms of building height. Consider lowering the roofline.**
 - **A landscaping plan is needed for all areas of the project. Increase the number of trees wells in the parking lots.**
 - **Lighting is very important. The project should include full cut-off and fully shielded lighting. Lights within hallways will also be important and all lighting should be designed not to impact the neighbors.**

- There are problems with the pedestrian and bicycle connectivity with the bike path. It is unclear how cyclists and pedestrians would access the path from the site.
- The size, bulk, and scale of the project is still an issue. The NBAR should comment specifically on the size, bulk, and scale.
- The traffic study should be used to shape the building footprints.
- Consider inclusion of storage areas in the parking lots for residences.

Cooney:

- The structures are much more aesthetically pleasing than the previous versions, however, this might not be the right project at this location.
- The intensity of the use may be too great at this site. The traffic study will help determine this.

Smyser:

- The buildings are more attractive and diverse than before.
- Mixed-use projects are good but are sometimes problematic. It may not be appropriate to design a residential project at this location due to the proximity to a busy road and busy commercial uses. Senior residential may be better.
- If the project is going to include a residential component open to all ages, then the needs of families must be addressed and designed into the project.

Valencia:

- In summary, the main issue with this project is traffic.
- All elevations need to be considered architecturally.
- The recreational component of the project needs more attention.
- Bldg D needs more architectural detailing; it appears to be a simple square box.
- The line behind Bldg E needs to be addressed. It appears to be a forgotten elevation.

Appeal process not applicable.
